Free first case

Setup

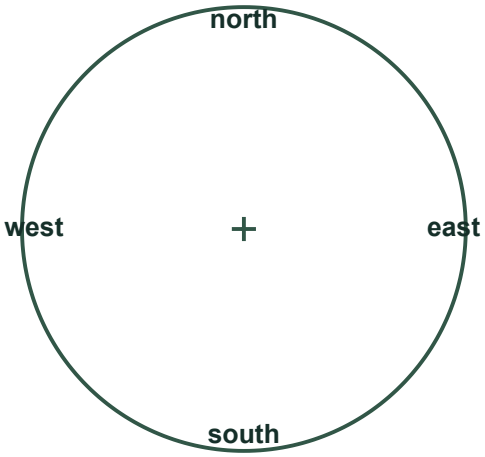

Choose one role each. Keep your pages private and describe the information your partner needs. Print single-sided at actual size. Keep the hints and solutions aside.

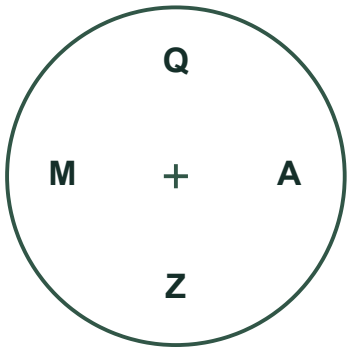

Folded Letters uses folds only. Lookout Dial needs scissors and a pencil; no fastener. Both work in grayscale.

Artwork assisted by AI. Puzzle layouts and answers checked by code. Personal use. Do not redistribute.

Case 1 · Role A

Cut out the lower disk and place its centre over the centre of the compass. Rotate the disk until the letter your partner names points in the direction they give. Read the disk letters at the two directions they request, in their order.

Case 1 · Role B

Ask your partner to align Z with east. The first code letter is at west, then read north.

Find the two-letter code. __ __

Hints

Case 1

Rotate the entire disk together. Once the named letter lines up, leave it there while you read both directions.

Solutions

Case 1 · QA

The aligned disk reads clockwise from north: A, Z, M, Q. Read in this order: Q → A.
